1. Write a style sheet code for following tasks:

Apply animation of <div> tag with effect of change color from red to blue. Translate and Rotate the image when mouse over the image. Use transition property.

2. Write a JavaScript code to divide a given array of positive integers into two parts. First element goes to first part, second element goes to second part, and third element goes to first part and so on. Now compute the sum of two parts and store into an array of size two.
